Notes:

See PCNS Maximum **Shutdown Time Negotiation** for how the Maximum Shutdown Time is determined.

See PCNS Low Battery Shutdown Behavior when the UPS goes into a Low Battery condition.

A Graceful Shutdown initiated from the Management Card will signal Graceful Shutdown for Maximum Shutdown Time + 2 Minutes before issuing the requested turn off, sleep, or reboot action to the UPS.

A Graceful Shutdown initiated from a Management Accessory (Interface Expander, UPS Remote Display, Out-Of-Band Management Card, etc) only signals Graceful Shutdown for Low Battery Duration before issuing the requested turn-off, sleep, or reboot action to the

A PCNS client has initiated a shutdown
